PROJECTS

SwiftCart: Multi-Portal E-Commerce Ecosystem

Architecture: Distributed Multi-App System (Customer, Seller, Delivery Partner)

- **Unified Database Architecture:** Engineered a centralized relational/non-relational database schema to handle concurrent transactions across three distinct user roles (Customer, Seller, Delivery).
- **Real-time Synchronization:** Implemented dynamic data pipelines ensuring that when a customer places an order, the seller's dashboard updates instantly and the delivery app triggers a logistics alert.
- **Seller Order Management Portal:** Built a robust vendor panel featuring inventory tracking, automated order status updates, and product catalog management.
- **Delivery Logistics Tracking:** Integrated a streamlined delivery workflow that transitions order status through packaging, dispatch, and final fulfillment stages.
- **Optimized Performance:** Deployed the frontend apps on Vercel with clean state management to ensure low-latency API communication and under 2-second page load times.

Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, JWT, Vercel

Cine Hub — Movie Discovery Platform

Core Focus: REST API Integration, Dynamic UI, & State Management

- **Advanced REST API Integration:** Implemented asynchronous data fetching mechanisms to securely consume TMDB endpoints for live search queries, trending media, and detailed movie metadata.
- **Debounced Search Optimization:** Engineered a custom debouncing mechanism for the search bar, reducing redundant API calls by 40% and optimizing client-side performance.
- **Dynamic Pagination & Filtering:** Built an infinite scroll / dynamic pagination system alongside multi-genre filters to handle large datasets smoothly without lagging.
- **Responsive Media UI:** Designed a modern, mobile-first user interface utilizing lazy loading for movie posters and backdrops to ensure fast initial page load times.
- **Error Handling & State Management:** Formulated robust error boundaries and loading states (skeletons) to maintain a seamless user experience during network delay or API failure.

Tech Stack: Next.js, React, JavaScript

SKILLS

Frontend:	React.js, Next.js, HTML5, CSS3, JavaScript (ES6+), Tailwind CSS, Responsive Design
Backend:	Express.js, JWT Authentication, Middleware
Database:	MongoDB, Database Design
Languages:	JavaScript, HTML, CSS
Tools & Platforms:	Git, GitHub, VS Code, Postman, Render, Vercel, MongoDB Atlas
Other Skills:	Problem Solving, Deployment
